## Low-E-Plus 2™ Double-glazing as thermally efficient as triple-glazing.

### REDUCE HEAT LOSS IN YOUR HOME BY 70% SIMPLY BY CHANGING THE GLASS.

New Low-E-Plus 2™, an energy-efficient glass designed to prevent even more heat escaping through your windows to the cold outdoors. Low-E-Plus 2™ is the only retrofit double-glazing to boast two invisible coatings which dramatically reduces heat transfer and reflects interior heat back into your room.

Many older double-glazed units do not contain low-emissivity glass and are therefore not energy efficient. By replacing your existing window glass with low-e glazing, you can improve the energy efficiency of your home, reduce your monthly heating bills and do your bit for the environment.

EnerGlaze Low-E-Plus2™ glazing units have a low U-value of just 0.9. They can significantly reduce the heat-loss from your existing windows and be as effective as triple-glazing when retrofitted into an existing double-glazed window frame.

#### How it works

#### Lower U-value = more effective insulating material

- |                                   |                                    |

**ENERGLAZE**  
HOME ENERGY UPGRADES

## BENEFITS

**Lowest u-value guaranteed**  
Retains heat in your home for longer

**Keep your Frames**  
Retrofitted into existing window frames. No need to change perfectly good frames.

**70% Better heat retention**  
Improves heat retention by as much as 70% if changing double-glazing and 82% if changing single glazing.

**Costs up to 50% less**  
When compared to new PVC windows. Costs up to 50% less than a full window upgrade.

**As we only change the glass there is little or no redecorating.**

### Suitable for:

Retrofitting into your existing window frames;

- PVC
- New windows

As part of a home energy upgrade
